AI STRATEGY · TEMPLATE

# AI Workforce Enablement Plan Template

For leadership and people teams who need to roll out AI capability across the organisation deliberately, role by role.

> How to use this: Complete each section to design a role-aware enablement rollout, then use the reinforcement schedule to keep capability current after launch.

## Current State by Role

Map how each function currently uses AI, informally or otherwise, before designing the plan.

| Role / Function | Current AI usage | Biggest visible risk | Enablement priority |
|---|---|---|---|
| Sales | | | |
| Support/CS | | | |
| Engineering | | | |
| Marketing | | | |
| Finance/Ops | | | |

## Explicit Permissions

Define what's encouraged, what's conditional, and what's off-limits before training begins.

What AI use cases are explicitly encouraged company-wide?

What AI use cases are allowed but require a review step before use?

What is explicitly off-limits (e.g. pasting customer data into public tools), and why?

## Role-Specific Training Content

- [ ] Sales: guidance on AI-assisted outreach and where a human check is required before send
- [ ] Support/CS: guidance on verifying AI-drafted customer replies against tone and accuracy standards
- [ ] Engineering: guidance on reviewing AI-generated code for security, licensing, and correctness
- [ ] Marketing: guidance on originality, brand voice, and disclosure for AI-assisted content
- [ ] Finance/Ops: guidance on verifying AI-assisted analysis before it informs a decision

## Rollout Plan

Who is accountable for designing and delivering this enablement plan?

What is the timeline for role-specific sessions to be delivered?

How will employees ask questions or raise concerns after initial training?

## Ongoing Reinforcement Rhythm

- [ ] Set a recurring cadence (e.g. quarterly) to review what's working and refresh guidance
- [ ] Create a simple channel for sharing effective AI use cases across teams
- [ ] Track and review any quality incidents traced back to unverified AI output
- [ ] Reassess tool approvals and permissions at each reinforcement cycle
